Python Releases for macOS

- [Latest Python 3 Release - Python 3.13.7](#)

Stable Releases

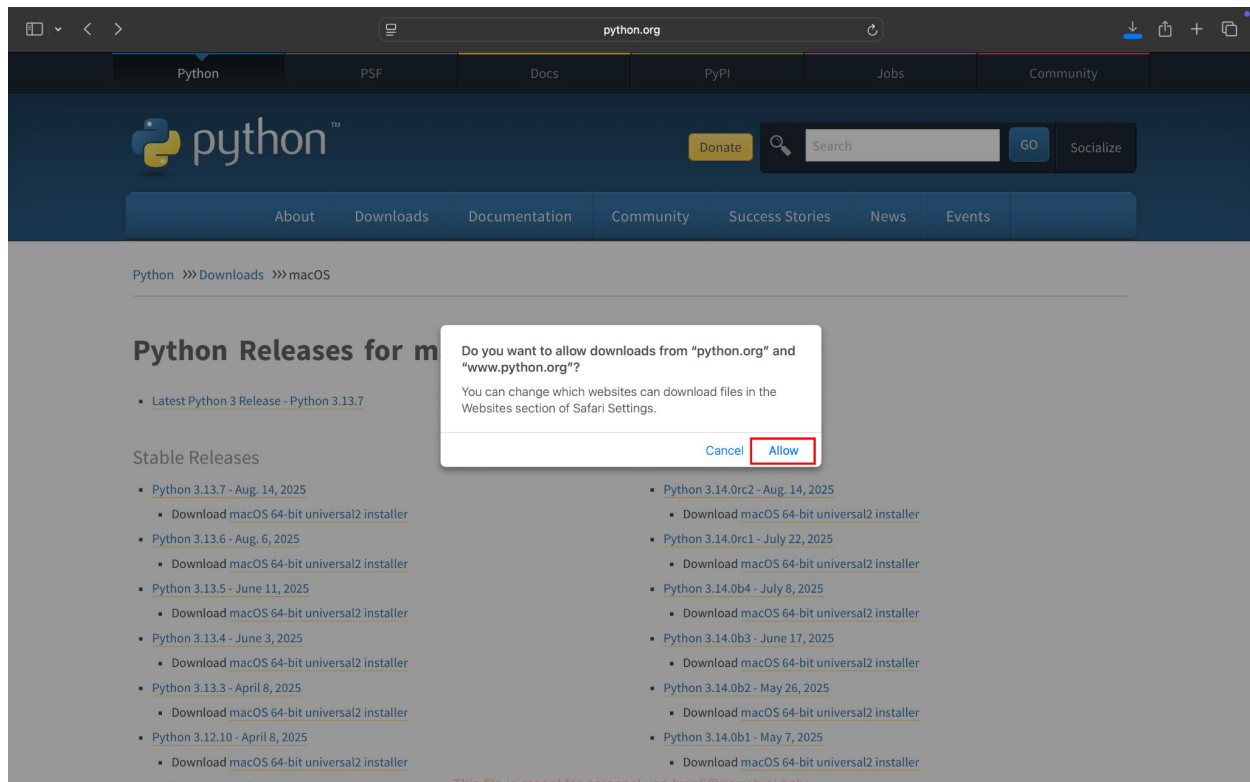

- [Python 3.13.7 - Aug. 14, 2025](#)
 - [Download macOS 64-bit universal2 installer](#)
- [Python 3.13.6 - Aug. 6, 2025](#)
 - [Download macOS 64-bit universal2 installer](#)
- [Python 3.13.5 - June 11, 2025](#)
 - [Download macOS 64-bit universal2 installer](#)
- [Python 3.13.4 - June 3, 2025](#)
 - [Download macOS 64-bit universal2 installer](#)
- [Python 3.13.3 - April 8, 2025](#)
 - [Download macOS 64-bit universal2 installer](#)
- [Python 3.12.10 - April 8, 2025](#)
 - [Download macOS 64-bit universal2 installer](#)

Pre-releases

- [Python 3.14.0rc2 - Aug. 14, 2025](#)
 - [Download macOS 64-bit universal2 installer](#)
- [Python 3.14.0rc1 - July 22, 2025](#)
 - [Download macOS 64-bit universal2 installer](#)
- [Python 3.14.0b4 - July 8, 2025](#)
 - [Download macOS 64-bit universal2 installer](#)
- [Python 3.14.0b3 - June 17, 2025](#)
 - [Download macOS 64-bit universal2 installer](#)
- [Python 3.14.0b2 - May 26, 2025](#)
 - [Download macOS 64-bit universal2 installer](#)
- [Python 3.14.0b1 - May 7, 2025](#)
 - [Download macOS 64-bit universal2 installer](#)

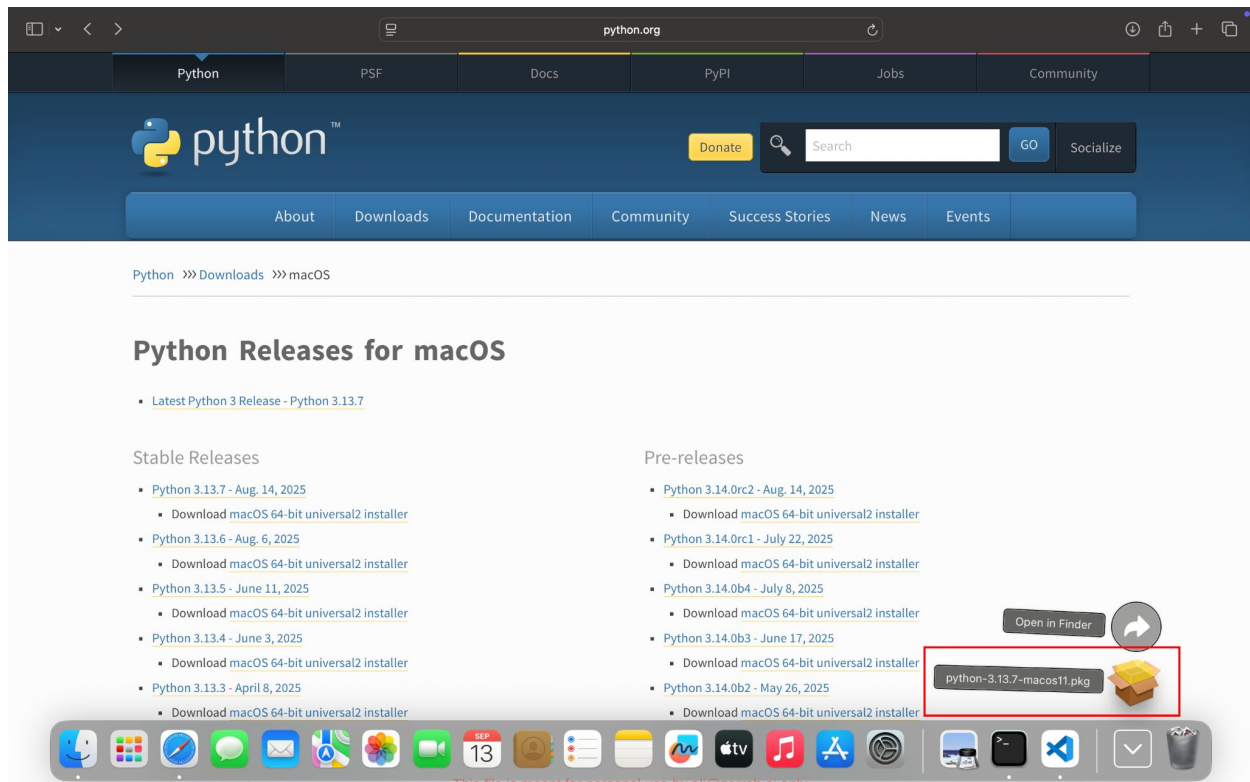

Python

1. Grant the permission to download via Allow button.

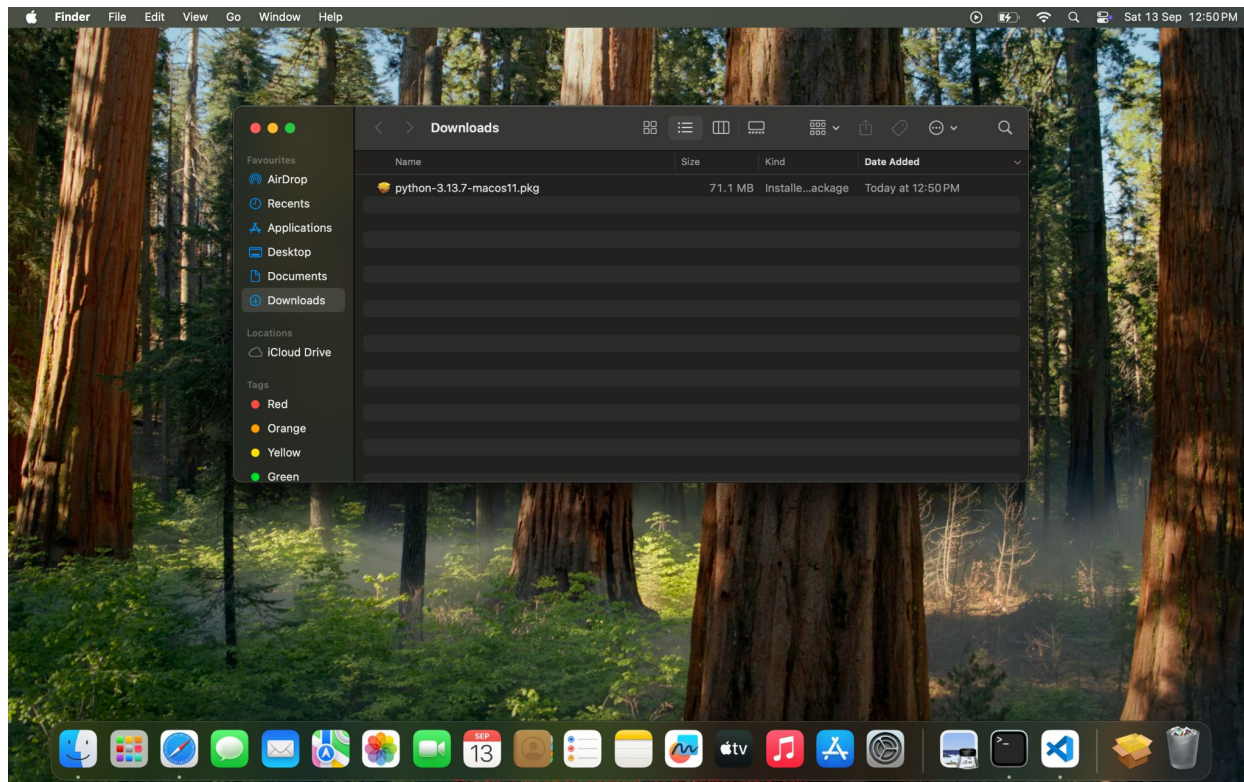

Python

1. Download will start once permission is granted.
2. Status shown for Safari; position may vary in other browsers.

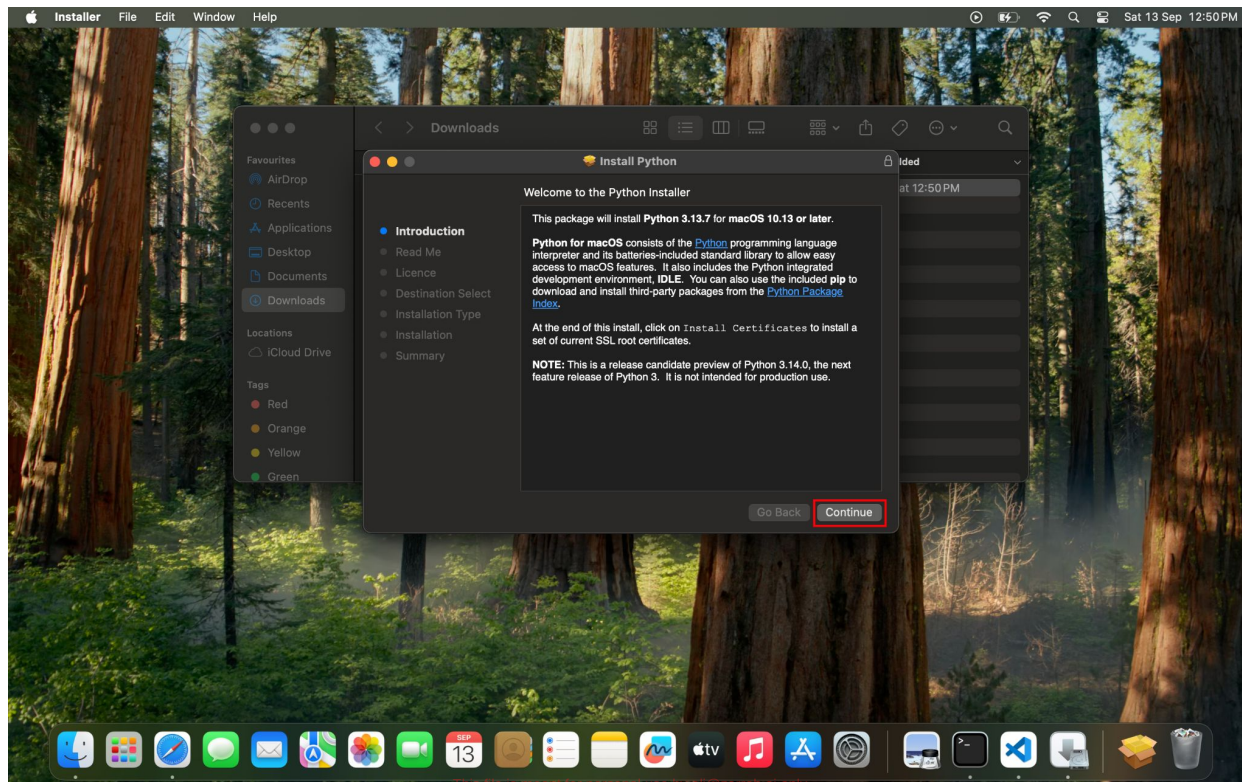

Python

1. Once the download is complete, check Finder's Downloads for the Python installer pkg.

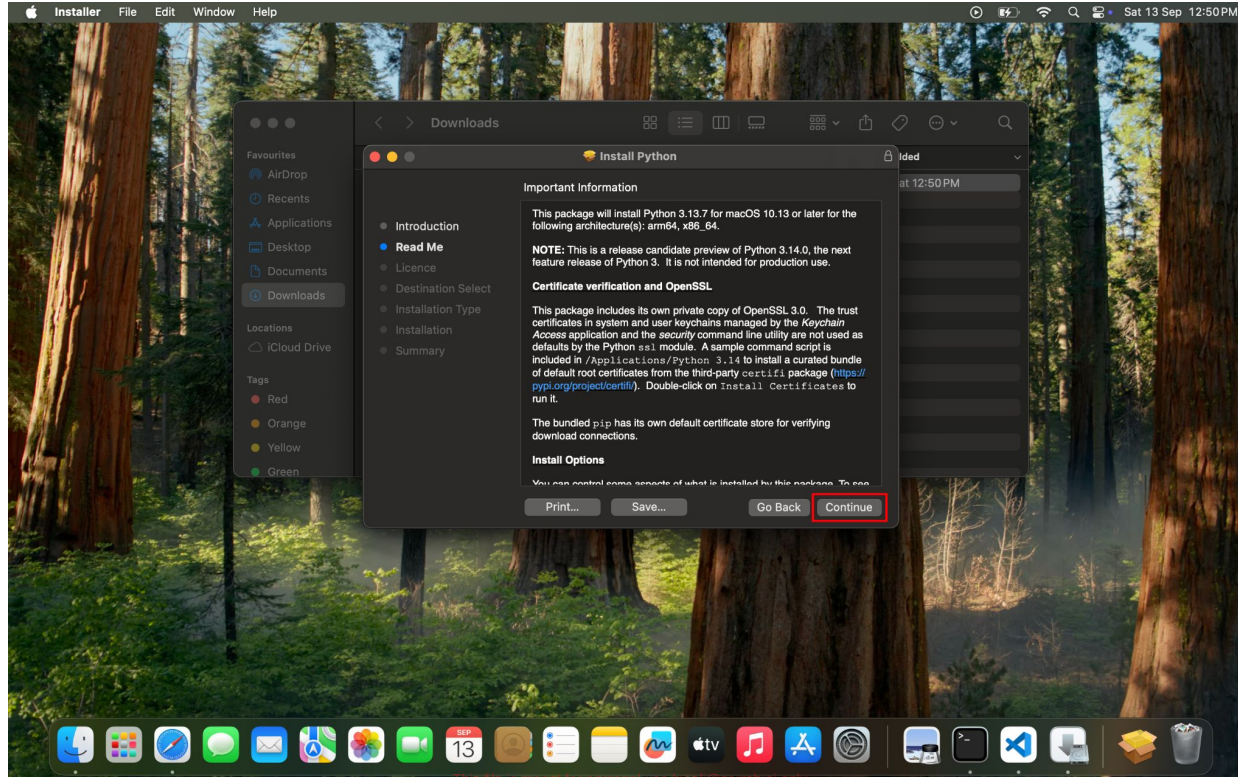

Python

1. Double click the installer to open the installation window.
2. Once into the installation window, click “**Continue**”

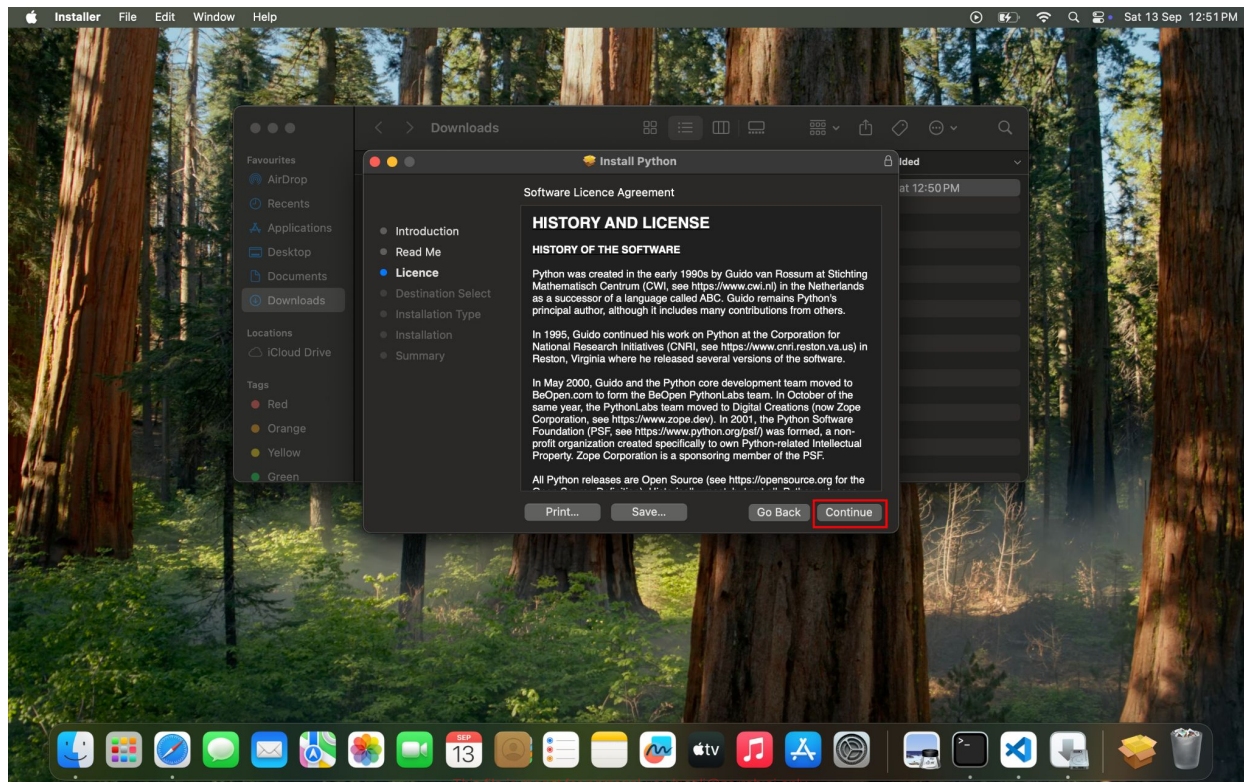

Python

1. Click on the “Continue” in the readme section.

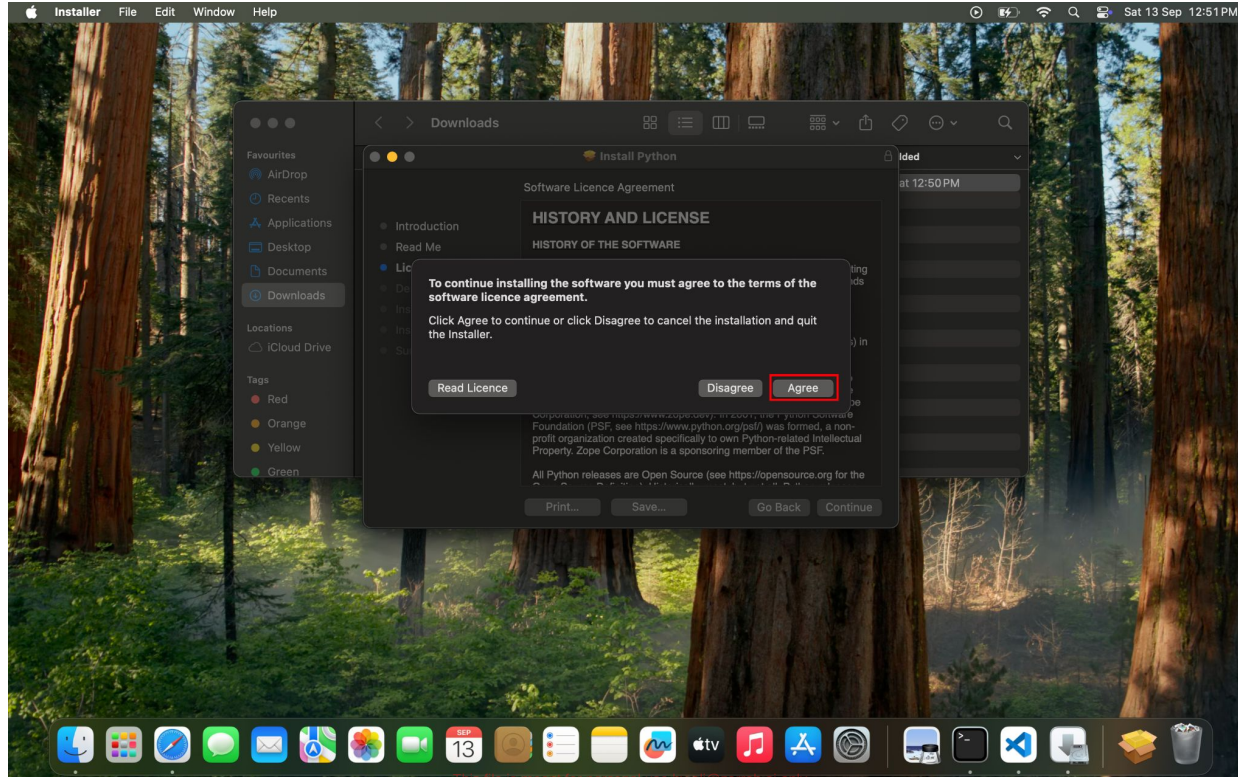

Python

1. Click on “Continue”.

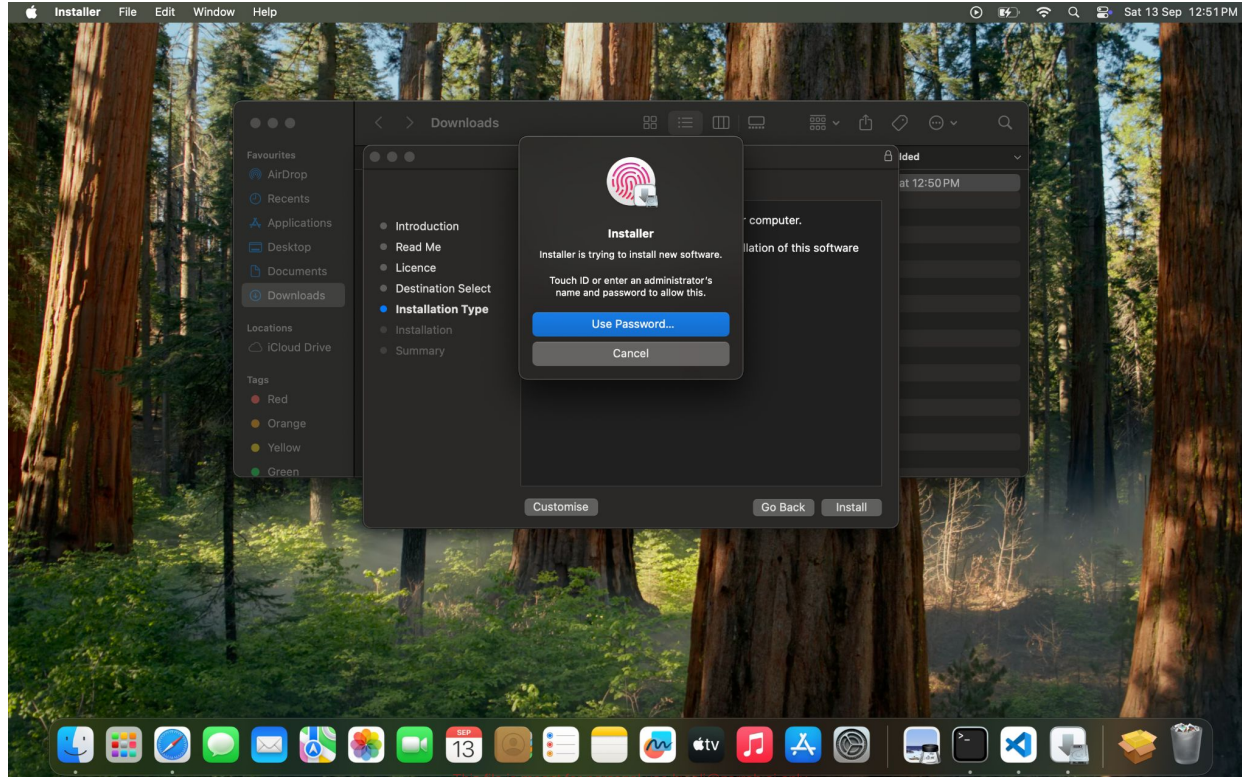

Python

1. Click on “**Continue**” in the Terms and Conditions Section.

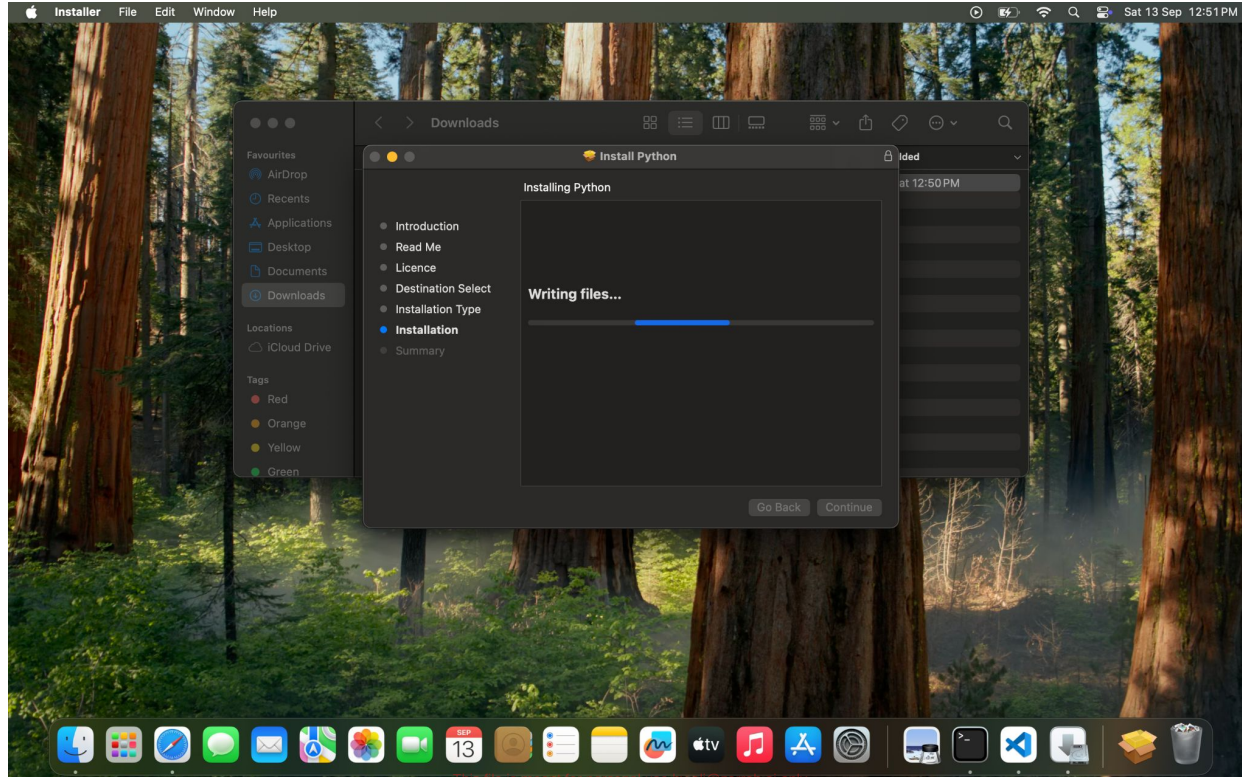

Python

1. Authorize installation with your Touch ID/Password.

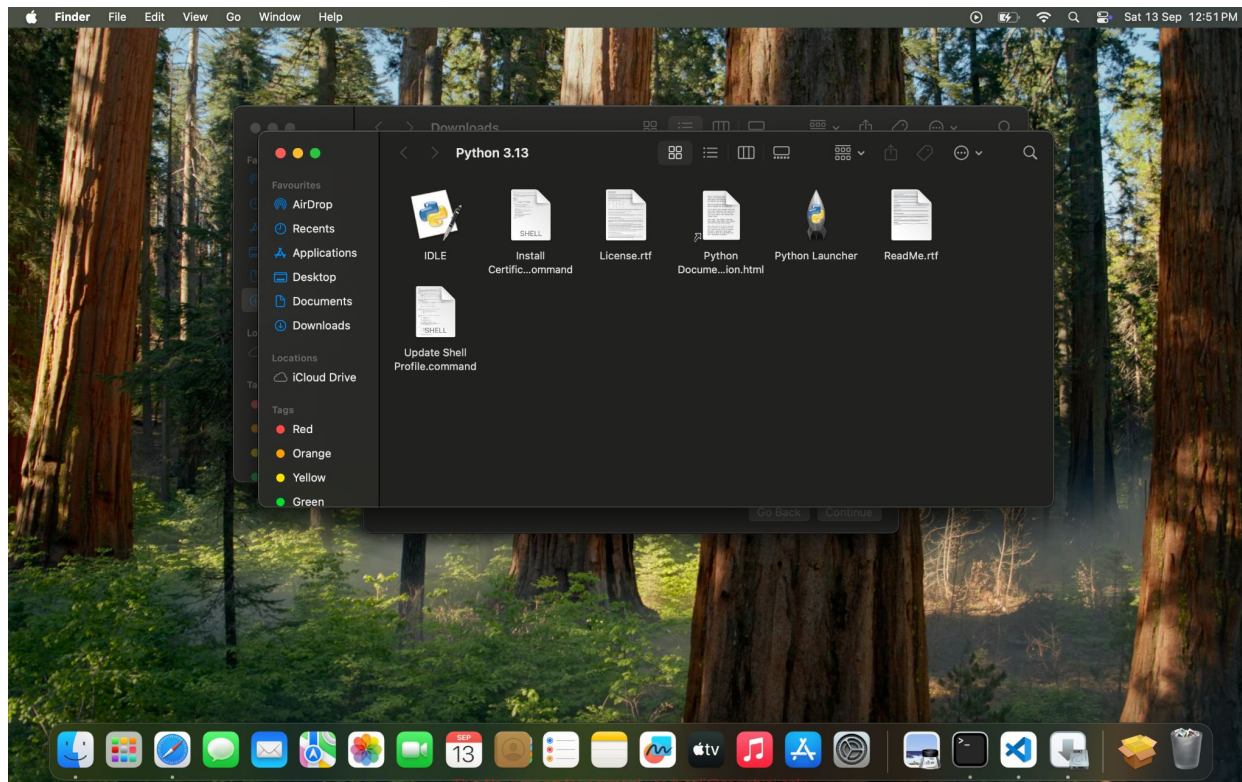

Python

1. The installer will write files to your machine. Please wait until the process is complete

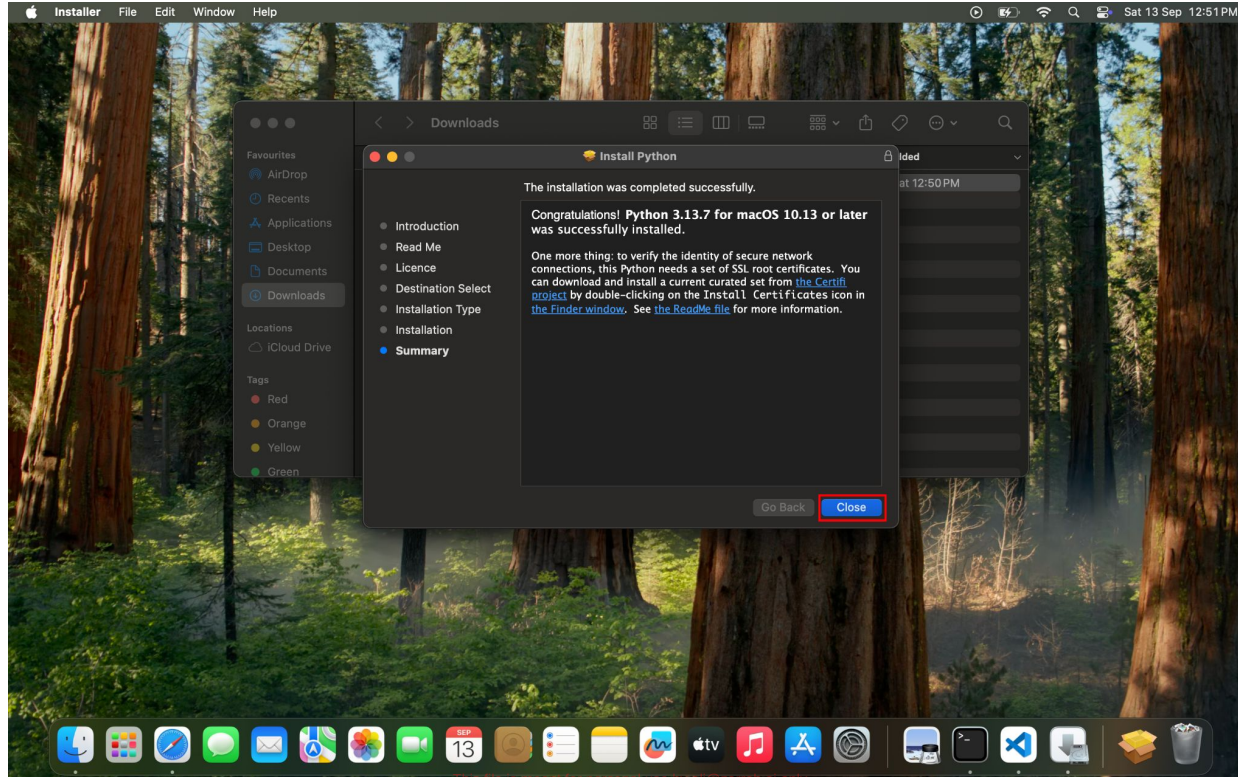

Python

1. A window will open displaying the installation folder and its contents.
2. Close this window, come back to the installer.

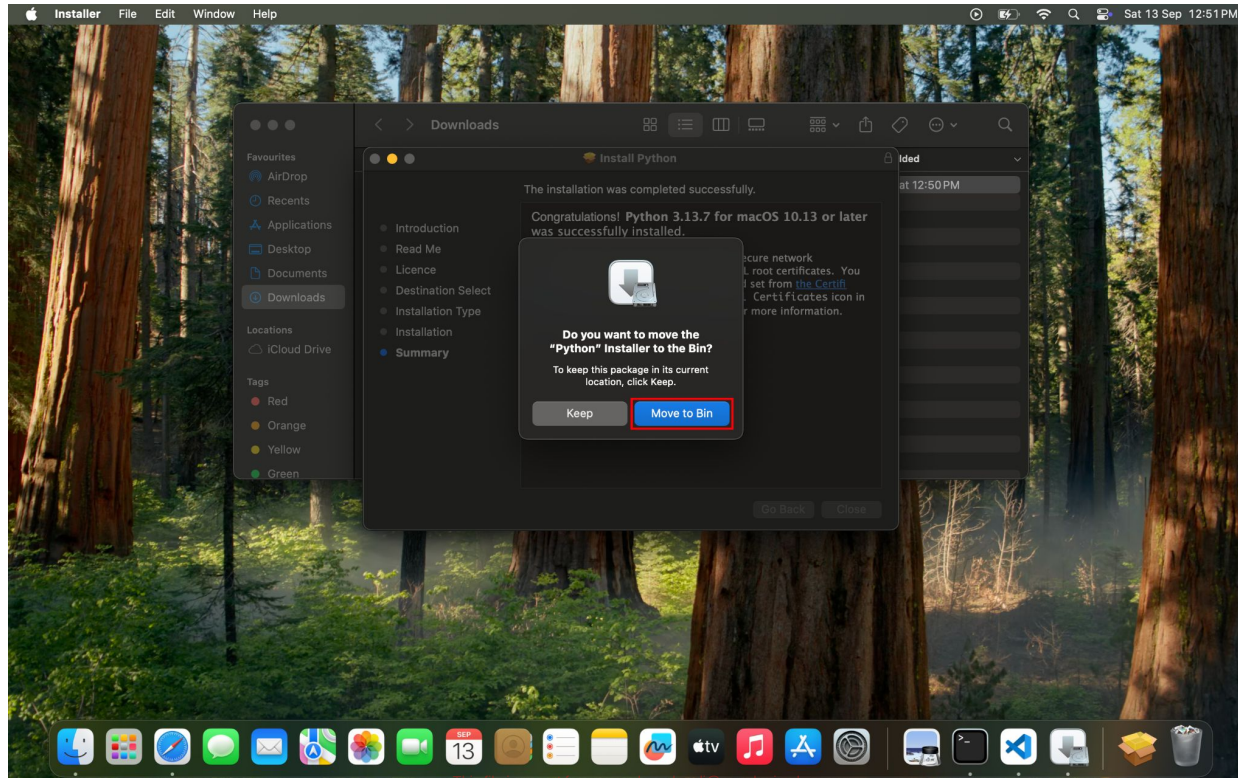

Python

1. Click on close to complete the setup.

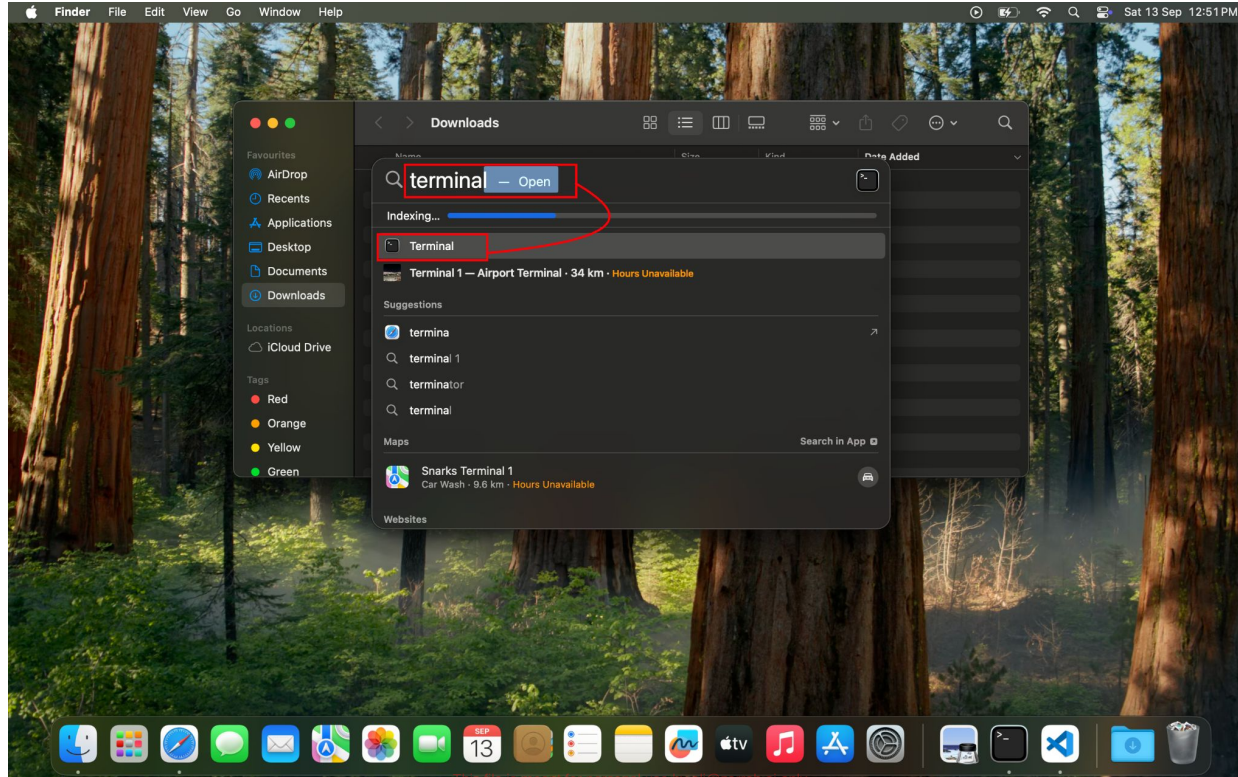

Python

1. Once the installation is complete, the system may suggest removing the installer. You can move it to the Bin if you wish.

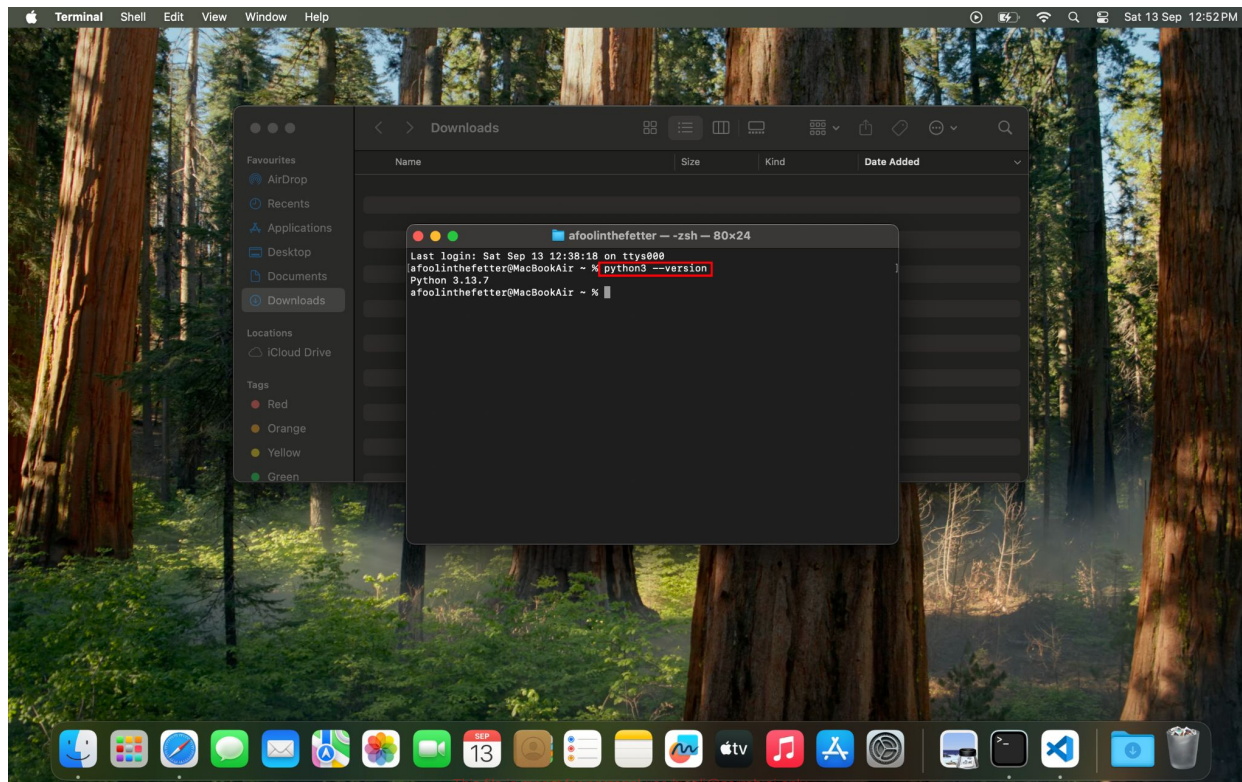

Python

1. Open Spotlight Search with Command(⌘) + Space, and type terminal.
2. Click on the first suggestion to open terminal.

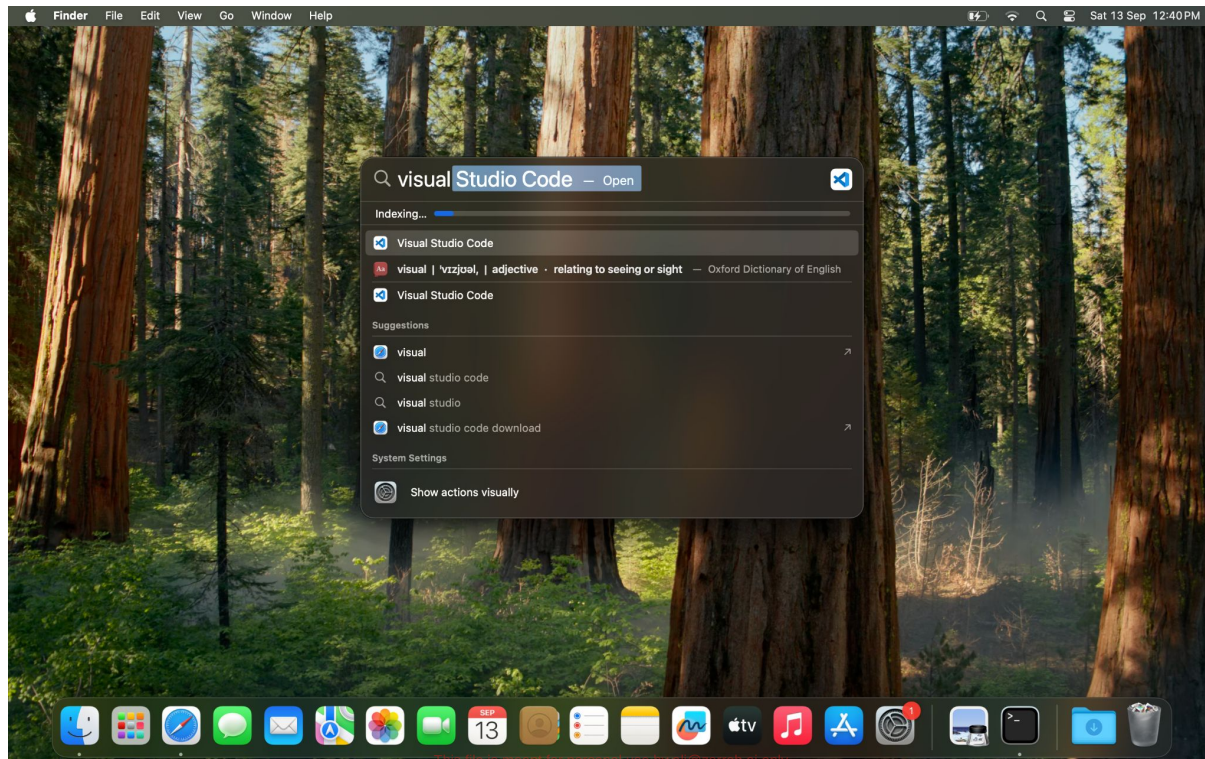

Python

1. Type `python --version` and press Enter. You should see the Python version (e.g., 3.13.7), confirming the installation was successful.

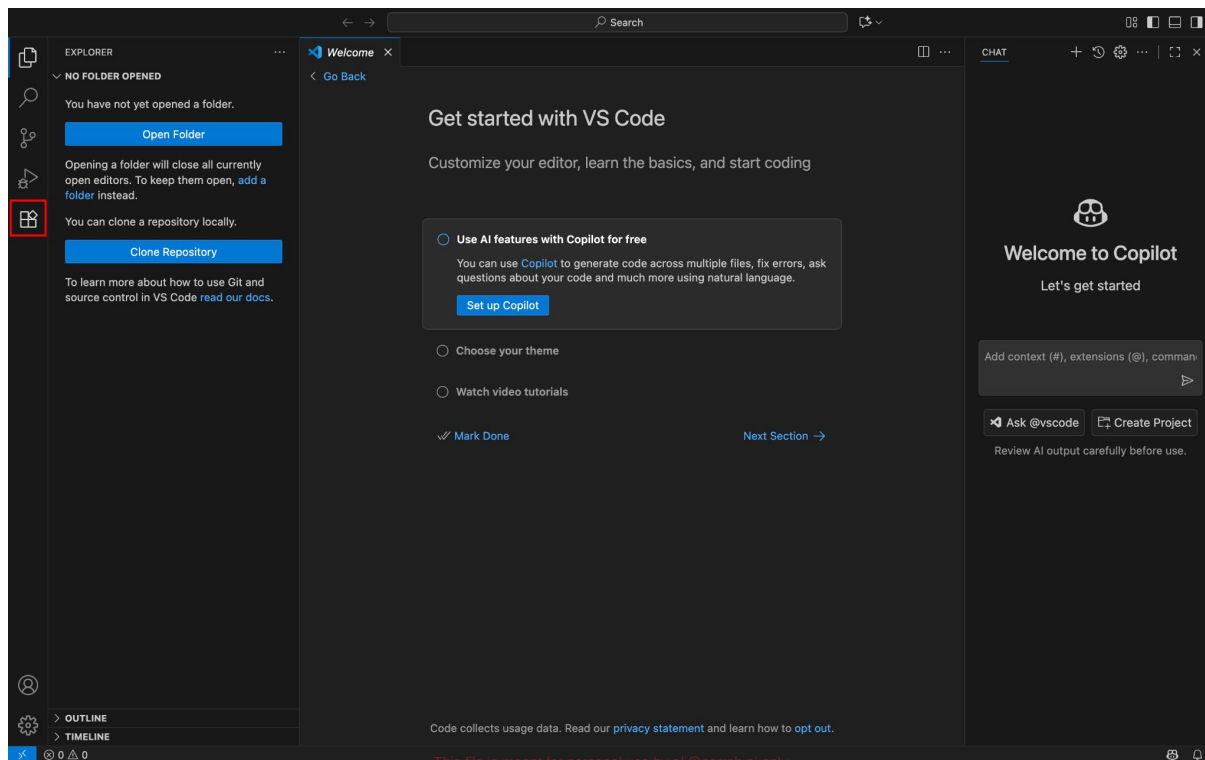

Jupyter Notebook

1. Open Spotlight ($\text{Command} + \text{Space}$), type 'Visual Studio Code', and select the first application from the list to launch it.

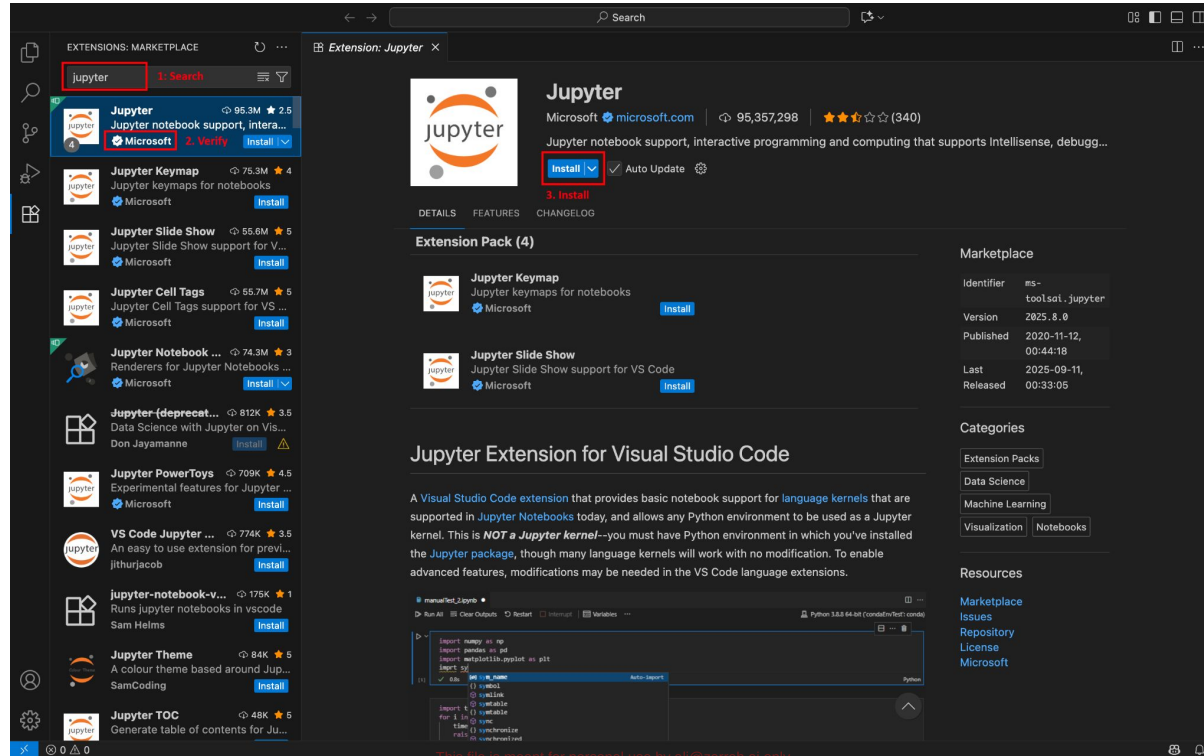

Jupyter Notebook

1. Once the VS Code application is open, navigate to the extensions 

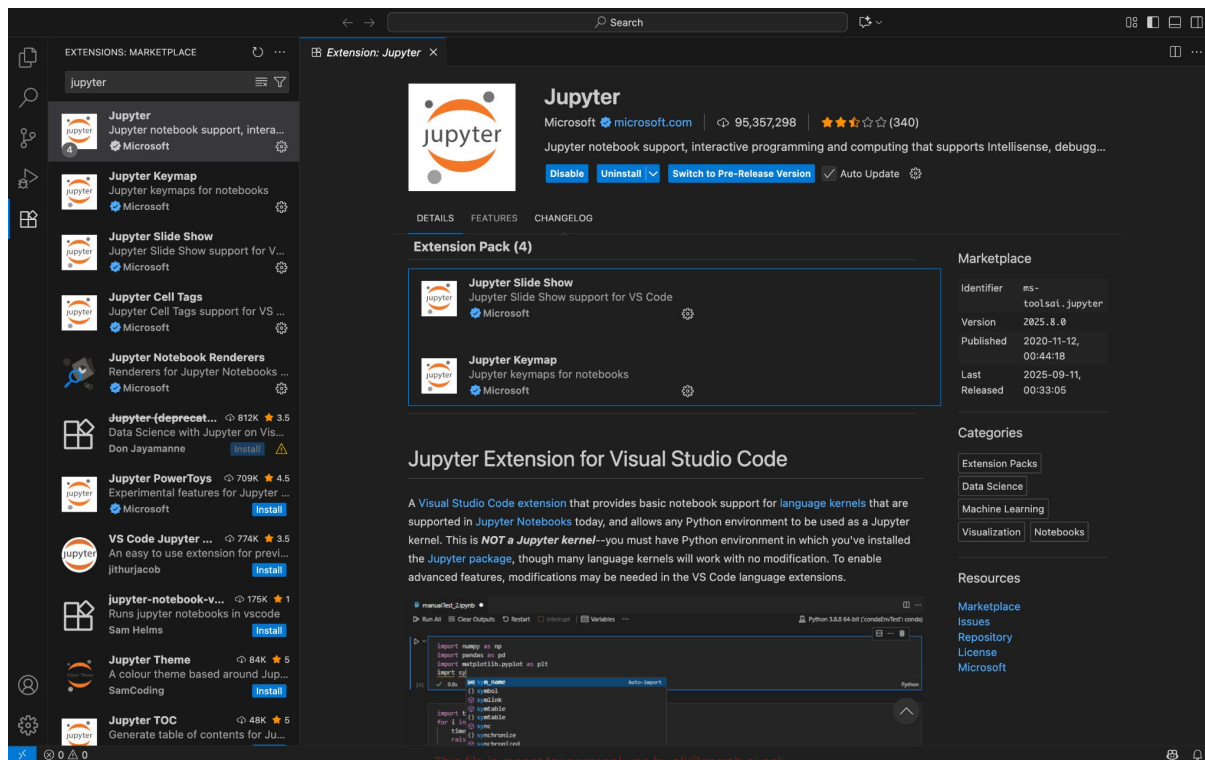

Jupyter Notebook

1. Search for `jupyter`, Verify that it is from Microsoft and then click on Install.

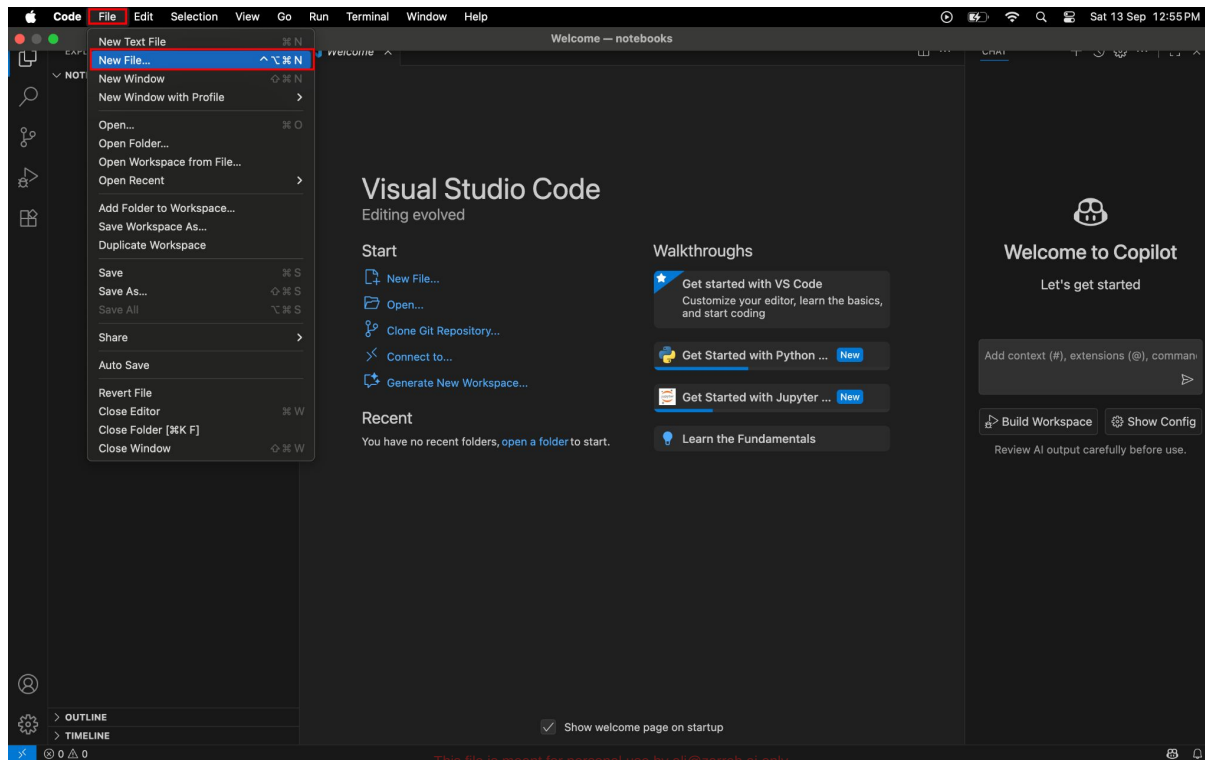

Jupyter Notebook

1. Once Jupyter is installed, you should see this on the screen.

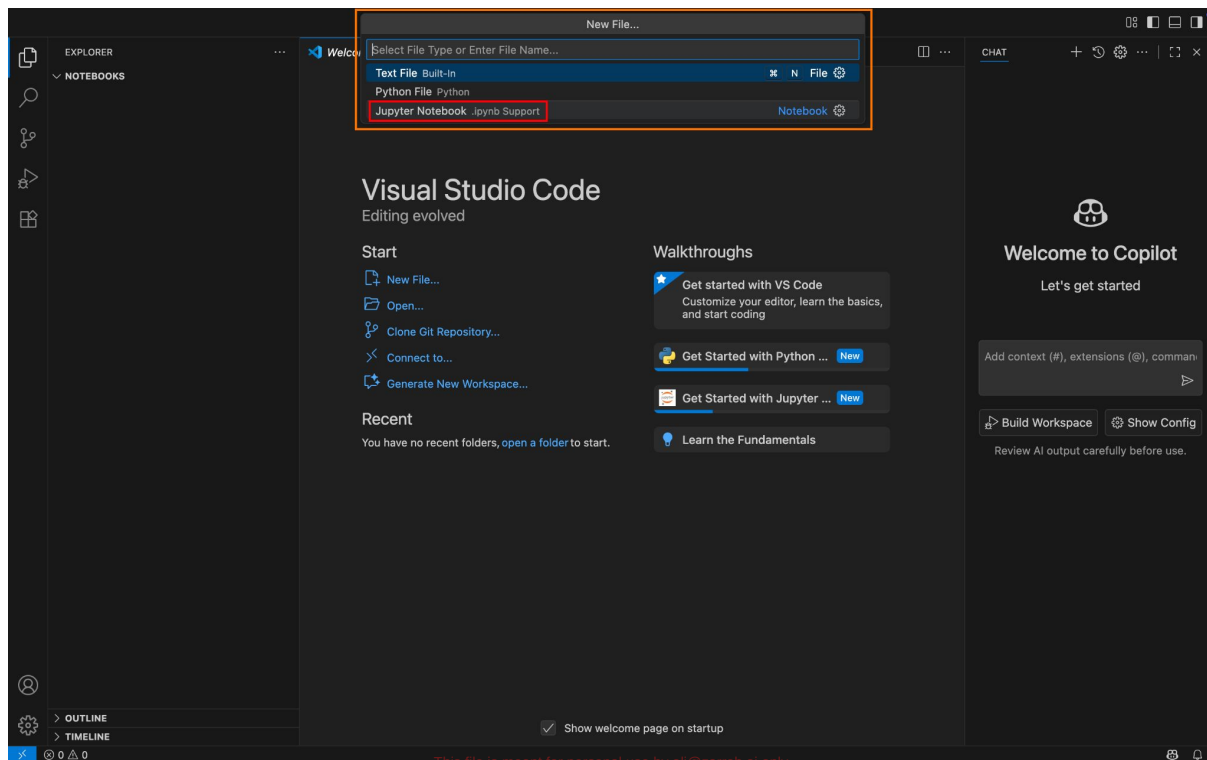

Jupyter Notebook

1. To open a new notebook, navigate to **File** and then to **New File**.

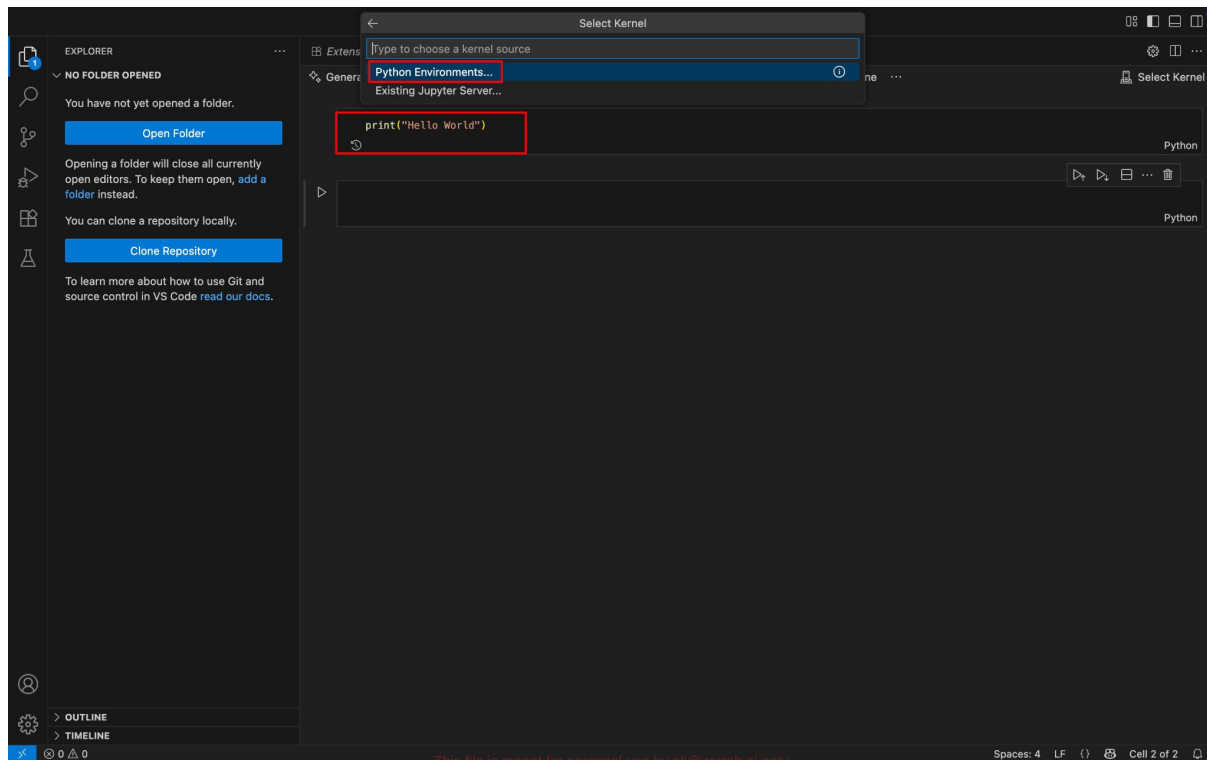

Jupyter Notebook

1. You'll see the dropdown to select the File Type. Choose Jupyter Notebook from the dropdown.

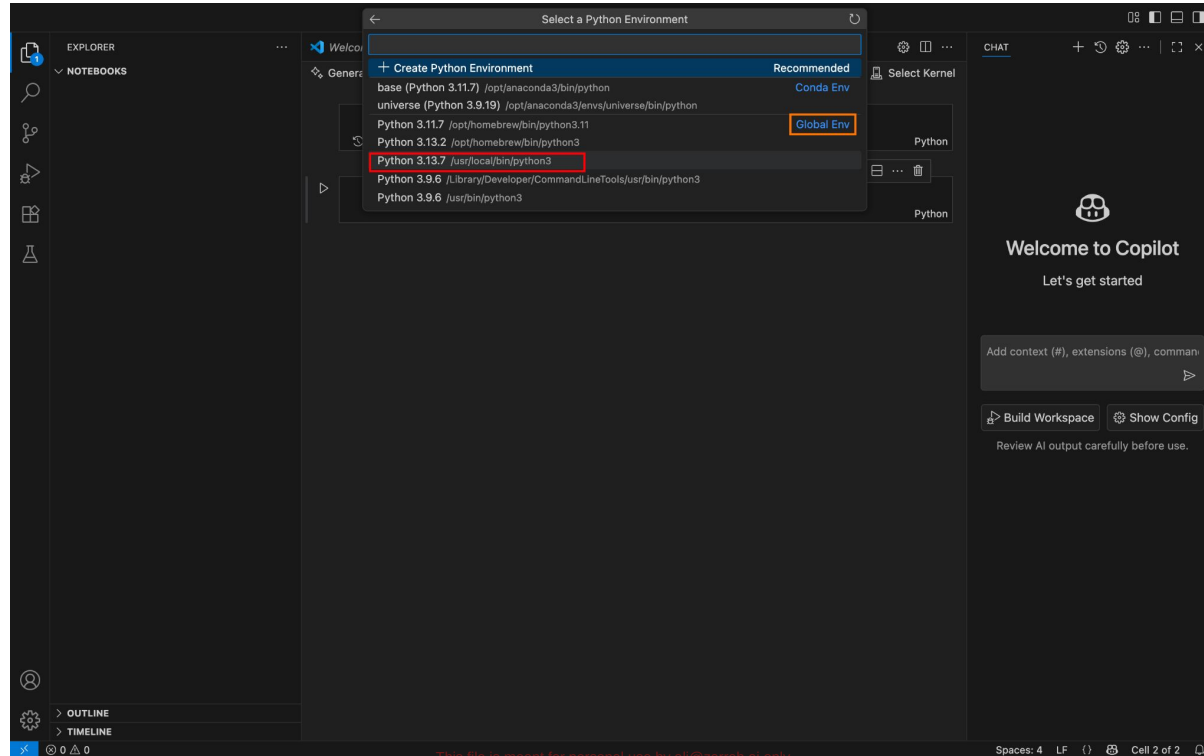

Jupyter Notebook

1. In the first cell write code snippet: `print("Hello World")` and run the cell with (Command(⌘) + Enter).
2. You'll be asked for a kernel source and there choose Python Environments.

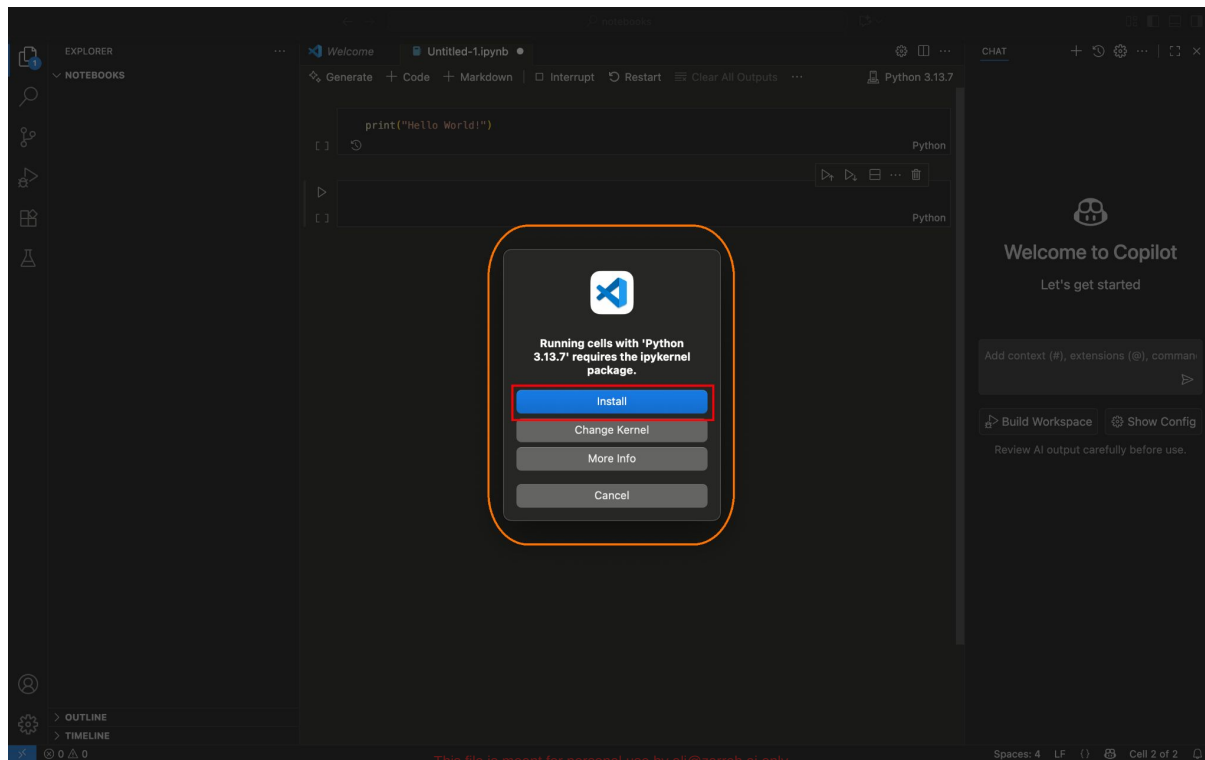

Jupyter Notebook

1. In the Global Env, you'll see the version of python that you had installed.
2. Select on that python version.

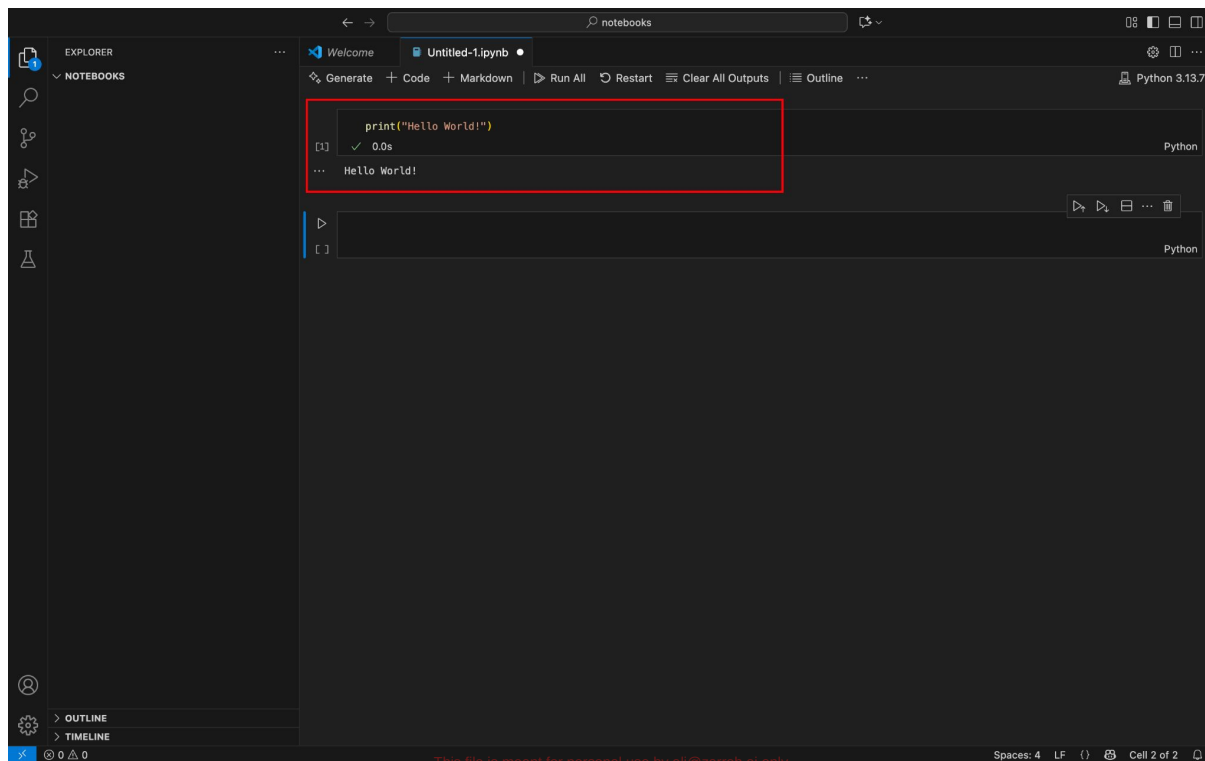

Jupyter Notebook

1. You might be prompted to install `ipykernel`. Click on install and let it run for a while.

Jupyter Notebook

1. After the ipykernel is installed, you can see the output on the screen.

Happy Learning !
